

there are two types of grooved joints.
despite what rover dealers will tell you
the newer metal seals trx100060 & ung100060 WILL NOT fit in the small groove type.

trx100100 & trx100110 will fit both types of grooved joints (and the plain joints if you cut the outer lip off)

the very early non grooved joints use flat seals. 40-62-9mm & 40-76-9 are the sizes
the small grooved joints have a step on the inner part where the seal runs. the large groove type have no step
EDIT: just measured the joints & added seal pic.
small groove type 44-57-2.5mm
large groove type 40.3-60-4mm (inner-outer-depth)
late type large groove joint is on the right.
hth.

trx100100 & trx100110 seals at the bottom
